Discontinuation of Low-enrollment Master's Programs

College of Engineering and Mines

The University of Alaska Board of Regents has requested that the UO Board of Regents discontinue the

- engineering
- management
- Environmental
- Mineral Preparation Engineering
- Software Engineering

Collectively, these specialized degree programs have not attracted

enrollment that includes the number that students

program.

The College of Engineering and Mines

Engineering Master's in

Arctic Engineering

Arctic Engineering

"Arctic Engineering" is a program that focuses on the design and construction of infrastructure in the Arctic region. The program is designed to provide students with the knowledge and skills needed to work in this unique and challenging environment.

The program is a four-year undergraduate degree program that is offered by the University of Alaska Fairbanks. The program is designed to provide students with a strong foundation in engineering and construction, as well as a deep understanding of the Arctic region and its unique challenges.

Students in the program will take courses in engineering, construction, and Arctic studies. They will also have the opportunity to participate in fieldwork and internships in the Arctic region.

Upon graduation, students will be prepared to work in a variety of roles in the Arctic region, including as engineers, construction workers, and project managers.

The program is a highly competitive and sought-after degree program that provides students with a unique and valuable education. It is an excellent choice for students who are interested in engineering and construction in the Arctic region.

For more information about the program, please visit the program website at www.alaska.edu/programs/arctic-engineering.
